TBUD-150
Analogue Panel Two Loops Card

Description

The TBUD-150 card lets you add two loops per card to your CAD-150-8 Analogue Fire Control Panel.

Each loop may control up to 250 elements, and a limitless number of detectors and modules can be installed. The communication and power supply between the loop elements and the fire control panel is carried out through 2 wires. The element connection supports non-polarity.

Features

o   Expandable Two Loops Card for CAD-150-8 Fire Control Panel

Technical features

Panel Loop Card	
Loop features:	
Maximum quantity of elements:	250
Maximum load:	400 mA
Maximum loop length:	2 Km
Maximum cable resistance:	44 Ohm
Maximum cable capacity:	500 nF/Km
Environment	
Operating temperature: From -5ºC to +40ºC	
Relative humidity: 95% without condensation
